

WIFI Chronothermostat for radiator

Art. 140

100% MADE IN ITALY 

Function

WIFI radiator chronothermostat with weekly programming and installation on thermostatic valves for the room temperature regulation.

These devices art.140 can independently maintain the present comfort temperatures according to predefined daily/weekly programs or freely programmable by the user. The shutter acts on the valve, determining its opening, even partial, according to the difference between the set temperature and the detected one.

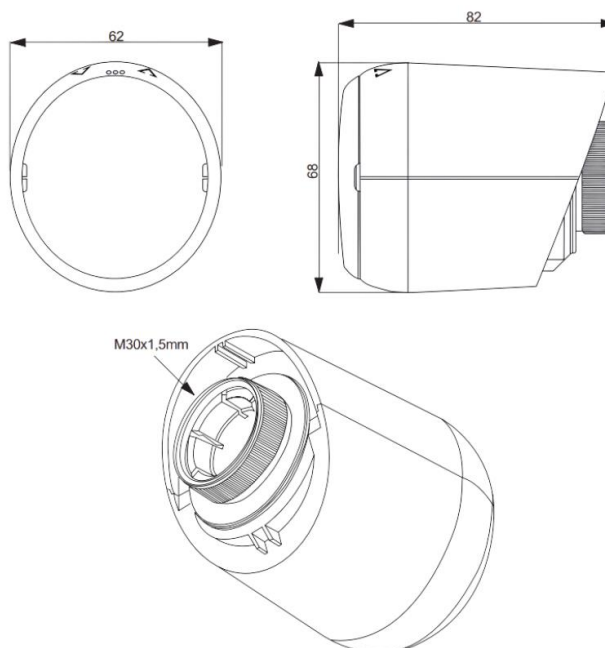

Classification according to point 6 of the Communication 2014 / C 207/02 of the European Commission: class IV.

Programming and control can be managed via **smartphone** or **tablet** through the free app, available on **App Store** and **Google Play**. The thermostat is also compatible with major home automation systems, such as Google Home and Amazon Alexa.

The connection is **suitable with every Pintossi thermostatic valve** thanks to the specific included adaptor, and also with all thermostatic valves with 30 x1,5 thread.

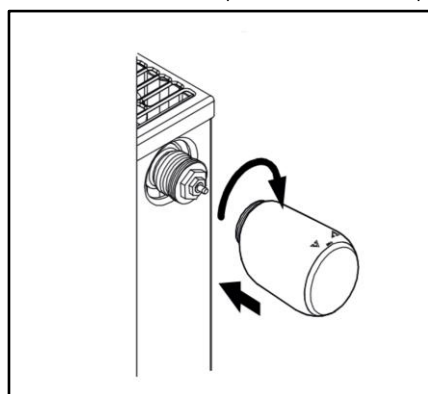

Technical specifications

Operation:	Automatic and manual
Power supply:	2 batteries 1,5 V (type AA)
Operating temperature:	0 ÷ 50 °C
Protection degree:	IP 30

Installation

The chronothermostat can be installed on any type of Pintossi + C thermostatic valve thanks to the use of the included adaptor, without interrupting the heating circuit.

Follow the below steps to install the device:

1. Unscrew the protection cap of the thermostatic valve;
2. Insert the adaptor into the coupling ring;
3. Screw the coupling ring complete with the adaptor on the thread of Pintossi + C thermostatic valve;
4. Insert the chronothermostat on the coupling ring as long as you hear the click that confirm the successful connection;
5. In case of thermostatic valves with 30x1,5 thread the coupling ring can be screwed directly on the valve without using Pintossi + C adaptor.

Warning: do not apply overexertion when fixing the chronothermostat on the coupling ring.

App smart management

The device is equipped with a built-in Wi-Fi module that allows it to connect directly to the home router. This way, it can communicate with the app even remotely, giving full control anytime and anywhere. Through the app, it can be easily manage one or multiple devices installed in a home, setting the ideal temperature for each room from a distance.

Main features include:

- Creating rooms within the app
- Assigning devices to rooms according to their location
- Customized scheduling for each room
- Setting up dedicated "vacation" programs
- Enabling the *Keyboard Lock Plus* function
- Activating and managing the *Open Window* mode
